

Frequently Asked Questions: Nuclear Radiology
Review Committee for Radiology
ACGME

Question	Answer
Program Personnel and Resources	
<p>What amount of time would be considered sufficient for a program coordinator to devote to a program?</p> <p><i>[Program Requirement: II.C.1.]</i></p>	<p>A full-time coordinator position dedicated only to the fellowship is not required. A fellowship coordinator may be a part-time position for an individual who also devotes time to the core diagnostic radiology residency program and/or to its associated subspecialty programs. As long as the coordinator is able to fulfill the educational goals and administrative responsibilities of this specific program, the time he or she dedicates would be considered sufficient.</p>
The Learning and Working Environment	
<p>Can residents be supervised by licensed independent practitioners for the imaging aspects of patient care?</p> <p><i>[Program Requirement: VI.A.2.a).(2)]</i></p>	<p>Only licensed physicians who are credentialed to perform imaging procedures may have primary responsibility for supervising the imaging aspects of patient care.</p>
<p>What does the Review Committee consider an optimal clinical workload for fellows?</p> <p><i>[Program Requirement: VI.E.1.]</i></p>	<p>Optimal clinical workload must maximize fellows' learning experience without compromising patient care. The number and distribution of cases will vary with the responsibility appropriate to each fellow's demonstrated competence over the course of his or her education. Program directors must determine minimum and maximum patient loads by including faculty members' and fellows' input into an assessment of the learning environment, including patient safety, fellow education, severity and complexity of patient illness/condition, and available support services.</p> <p>Both insufficient patient experiences and excessive patient loads may jeopardize the quality of fellow education.</p>
<p>Who should be included in the interprofessional teams?</p> <p><i>[Program Requirement: VI.E.2.]</i></p>	<p>All interprofessional team members must participate in the education of residents, and team members may include ancillary personnel, attending diagnostic radiology physicians, diagnostic radiology technologists, nurse practitioners, nurses, physician assistants, and radiation safety personnel. The team may also include individuals from referring clinical services, medical physicists, and radiopharmacists.</p>
